

LABORATORY PRESS KIT

FOR A BETTER LIFE

**Living better, longer and in good health.
A pioneering vision.
An undiminished ambition.**

Founded in 1998 by Dr Jean-Pierre Agarra, Therascience is a laboratory specialising in **the research, development, manufacture and marketing of food supplements and dietary products.**

Living as long as possible in good health, at the peak of our physical and intellectual abilities, is the ambition that has guided the laboratory for almost thirty years.

With **Physionutrition®**, an innovative medical discipline, Therascience offers **a global and personalised approach to health**, based on **prevention and support for health conditions** through **nutritional and micronutritional care.**

Not just to **live longer**,
but to **live better and in good health.**

**Discover the laboratory in pictures,
before we tell its story.**

Physician, founder and visionary, **Dr Jean-Pierre Agarra** embodies the DNA of Laboratoire Therascience through a **scientific**, innovative and deeply human approach to health.

His commitment carries the Laboratory's promise: **"For a Better Life"**

Therascience's headquarters have always been based in **Monaco**, and today its reach extends to more than **20 countries** through its subsidiaries and distributors.

The group has more than **200 employees** and a catalogue of **750 products** across **11 ranges**.

"Together, let us build a better world in which to live as long as possible in good health and at the peak of our physical and intellectual abilities."

DR JEAN-PIERRE AGARRA

CEO and Founder of Laboratoire Therascience

FOOD SUPPLEMENTS a market that doubled in ten years

It continues to grow, driven by consumers seeking prevention, naturalness, vitality and personalised support.

Key figures for the food supplement sector in France:

€3bn in 2025

61% of French people say they have taken them in the last 24 months.

+2.6% growth compared with 2024

81% of consumers look first and foremost for product usefulness and naturalness

Consumers' main selection criteria

79% No additives

71% Familiar ingredients

72% The prescriber's advice

66% Made in France

Behind every formula, research and medical experience.

Therascience has built a collaborative approach bringing together doctors, pharmacists, engineers, researchers and academics. What sets it apart is the link between research, formulation, clinical practice and feedback from healthcare professionals in the field.

Integrated R&D. Science as the foundation.

Based in Monaco, the research and development department selects the raw materials, designs the formulas and follows the products right through to batch control. It relies on a **multidisciplinary scientific committee and a medical committee** which meet every month.

This close relationship with **doctors committed to nutrition and to preventive and functional medicine** feeds into product development: needs observed in consultation, published data, choice of active ingredients and consistency of dosages.

Therascience develops exclusive, innovative and demanding formulations.

The form of the active ingredient, dosage, combination and bioavailability (its ability to be absorbed and used by the body) are all examined during formulation. A concrete example: **Probio-protect®**, a **microencapsulation designed to protect each probiotic individually**.

Products are **manufactured in Europe** by audited partners. Independent laboratories carry out quality analyses. The **Therascience Clean Label®**, the laboratory's own formulation commitment, also governs **the choice of excipients and excludes, among others, artificial colourings and flavourings**.

AN EXAMPLE OF THE LABORATORY'S SCIENTIFIC EXPERTISE

Gut microbiota: **CBM 588** An exclusive product

TEOLIANCE® CBM588® illustrates this ability to offer exclusive products. Formulated with the butyrate-producing strain ***Clostridium butyricum* CBM588®**, it is marketed exclusively by Therascience in **France, Belgium and Luxembourg**, as part of a partnership with the Japanese laboratory Miyarisan Pharmaceutical Co. Ltd.⁸

This innovation has been covered by numerous articles in the press, notably in **ACTIF'S CONNECT** and **Le Quotidien du Pharmacien**.

Training healthcare professionals: at the heart of the Laboratory's commitments

Scientific Meetings have been held every year since 2001.

Today the laboratory runs more than **1,000 training sessions a year**, and offers the Pharm'Academy for pharmacy teams. Its scientific partner, the European Institute of Physionutrition and Phytotherapy (IEPP), offers **two university diplomas with the Faculty of Pharmacy of Université Grenoble Alpes**. The training programme for the second half of 2026 and for 2027 will extend this support with **the Mycotherapy Cycle**.

Full training programme available on request.

MORE THAN 50 NEW PRODUCTS A YEAR

Three launch dates a year

September, January and April set the pace of the laboratory's launches. New active ingredients, formats, products or reformulations enrich its responses to nutritional needs.

A non-exhaustive preview of upcoming innovations:

September 2026 | Two new mycotherapy drinks, and more...

The start of the season welcomes the **MUSHROOMSSENTIEL® CACAO** and **DECA** drinks, made from mushrooms ([Press Release](#)), and the **Super Food** range, including matcha, moringa, spirulina flakes and baobab.

On the nutricosmetics side, **DERMASSENTIEL** expands with **Hair Men & Women** and **Collagène Royal**, while **PHYSIOMANCE Émotions jour/nuit** completes this back-to-school selection.

January 2027 | A THERAKIDS paediatric range and new products

THERAKIDS, the laboratory's new paediatric range, will make a colourful and novel entrance with **syrups and gummies**.

The **PHYSIOMANCE** range will be expanded in particular with **Perméa gold with microbiota**, **MagFerrine** and **IntestiCalm**, as well as **Ferti+ Men & Ferti+ Women**.

Also announced: **TEOLIANCE GABA Boost**, **MUSHROOMSSENTIEL Maitaké** in the Mycotherapy range, and **Electrolytes lemon-mint / red berries**.

April 2027 | A new wave of launches

A third highlight will extend this momentum, with new exclusives to be unveiled at a later date.

Food supplements are not a substitute for a varied and balanced diet or for medical supervision.

They are not medicines.

Stories to tell. Teams to meet.

Stress, sleep, microbiota, longevity, children's nutrition or sports nutrition: Therascience supports the preparation of your articles, reports, interviews and digital formats. Teams to meet, formulas to decode and footage to shoot, depending on your story.

Products to discover and test

Journalists can receive products for discovery and editorial testing, upon personalised request to the Therascience Communication Department.

The selection is tailored to the topic being prepared, the products requested and their availability. Each shipment comes with useful information on the formulas, their conditions of use and precautions for use.

In Monaco, a tailor-made press immersion

On request, Therascience offers journalists and film crews a one- or two-day immersion in Monaco, with a VIP welcome and a fully personalised programme:

a tour of the R&D department, meetings with the founder and the teams, discussions with members of the medical and scientific committees, and product discovery. Each segment is prepared according to your editorial angle.

Time is set aside for individual **interviews** and **filming**, subject to the availability of the people involved and the agreed access.

The programme can also include **a discovery of the Principality.**

Dates and hosting arrangements are agreed with the Communication Department.

Product shipments and immersions are offered with no obligation to publish, in keeping with editorial independence and the rules specific to each newsroom.
